

MX150 AUDIO VIDEO PROCESSOR

Preliminary Product Literature

The new MX150 12-channel, 2-zone Audio Video Processor from McIntosh is designed to command the most advanced home theater installations with a potent suite of features including multiple subwoofer and center channel configurations, an electronic crossover function and on-board RoomPerfect™ processing. A built in Web Interface allows remote control, set up and service of the MX150 from any connected browser. The latest audio processing insures seamless compatibility with BluRay disc players. Incoming digital audio signals are re-clocked to minimize jitter for the best possible audio performance. With features and functionality far beyond those of typical A/V preamplifiers, the MX150 sets a new standard for high performance home theater.
